

How to donate your body

Human bodies are used to teach students about the structure of the body and how it works; they may also be used to train surgeons and other healthcare professionals. People decide in advance to donate their body after their death. These donations are highly valued by staff and students at anatomy establishments.

A donated body can be used for a number of possible purposes:

- 1 “Anatomical examination” -his term describes the teaching of the structure and function of the human body to students or healthcare professionals.
- 2 “Research” – this term describes scientific studies which improve the understanding of the human body.
- 3 “Education and training” – these terms describe the training of healthcare professionals, usually those learning surgical techniques, as opposed to anatomical examination.

Further information is available in our [FAQs](#).

The role of the HTA in body donation

The HTA licenses and inspects establishments which use donated bodies, such as medical schools. We also provide some general information about body donation.

We do not provide information on behalf of medical schools.

Please note we do not have out-of-hours telephone service for general body donation enquiries.

How to donate your body for anatomical examination

Under the Human Tissue Act 2004, written and witnessed consent for anatomical examination must be given prior to death; consent cannot be given by anyone else after your death. A consent form can be obtained from your nearest medical school and a copy should be kept with your Will. You should also inform your family, close friends and GP that you wish to donate your body.

Medical schools which accept donated bodies will normally only accept donations from within their local area due to the transport costs involved. Offers of body donation from outside the area may be accepted on the condition that the donor's estate bears the cost of transporting the body. Full details can be obtained directly from the Bequeathal Secretary at your nearest medical school.

Several medical schools are also involved in research requiring donated bodies. Your nearest school will be able to advise you on this.

Information on how to donate your brain for research can be found at the page 'Donating your brain'.

Body donation FAQs

Frequently asked questions about body donation

- Will the body donation consent form I signed 10 years ago still be accepted?
- I have recently moved to a different part of the country. Will I need to fill in a new body donation consent form?
- Can I donate my body if I am also on the NHS Organ Donor Register?
- Are there any costs or payments involved?
- What happens if my body is not accepted?
- If I donate my body, will there be a funeral or memorial service?
- Can I donate my body if I live in the Isle of Man or Channel Islands?
- What is the process for body donation in Scotland?
- What options exist if a witness did not sign the consent form?
- Are there any limitations or conditions to body donation?
- Can I consent on behalf of someone to donate their body to a Medical School for anatomical examination, if I have been granted 'power of attorney'?

I signed a body donation consent form 10 years ago and recently heard that a new law, affecting body donation, came into force in 2006. Will the consent form I originally signed be accepted when I die or must I complete a new form?

Although the new law affecting body donation (the Human Tissue Act 2004) came into force on 1 September 2006, it allows documented and valid consent for body donation made under the old law to be honoured. To avoid any unnecessary confusion or delays after you die, it is recommended that you include an updated intention to donate your body in your Will. More details can be obtained directly from the anatomy establishment to which you wish to donate your body.

I have recently moved to a different part of the country. Will I need to fill in a new body donation consent form?

Not necessarily. A form completed for one anatomy establishment might also be acceptable to another. More details can be obtained directly from the anatomy establishment to which you wish to donate your body.

If you have moved to a new area of the country, but still want to donate your body to the anatomy establishment linked to your old post code, please contact the establishment for more details. Some medical schools may request that your estate contributes to the cost of transporting your body if the donation falls outside of the medical school's local area.

Can I donate my body if I am also on the Organ Donor Register?

People who choose to donate their body or organs do so in the hope that they will be useful to others after their death. Despite being separate donation systems, it is possible for a person to be registered as an organ donor and to have registered their wish to donate their body, after death, to a medical school.

Medical schools will usually decline a body donation if the person has undergone surgery to remove organs for transplantation. However, if after their death, the person is found unsuitable to be an organ donor, then body donation to a medical school can be taken forward by the relatives, solicitor or executor of the will; assuming valid consent is in place.

If a person wishes to register for both organ donation and body donation, the HTA suggests that the person includes this in their Will and ensures that those closest to them are aware of their wishes.

For more information on organ donation please visit the [NHS Blood and Transplant website](#).

Are there any costs or payments involved?

You will not receive any payment for donating your body.

Some medical schools may request that the donor's estate contribute to the cost of transporting the body, particularly if the donation falls outside of the medical school's local area. Full details can be obtained directly from the medical school.

What happens if my body is not accepted?

If a medical school is unable to accept your donation, they may be able to help you find another school which can accept your body.

However, if no medical school is able to accept your offer, your estate will need to make suitable funeral arrangements.

If I donate my body, will there be a funeral or memorial service?

Medical schools will usually arrange for donated bodies to be cremated, unless the family requests the return of the body for a private burial or cremation.

Medical schools may hold a memorial service. Further information can be obtained directly from the medical school.

Can I donate my body if I live in the Isle of Man or Channel Islands?

The Human Tissue Act 2004 (HT Act) does not apply to the Isle of Man or Channel Islands and they have no body donation process of their own. It

might be possible for a medical school on the UK mainland to accept a body donation from the Isle of Man or Channel Islands resident, as long as the requirements of the HT Act are met.

You may need to make financial arrangements with a local funeral director, in relation to the transportation of your body to the medical school; of your choice. To enquire about whether this might be possible, please contact your nearest medical school.

What is the process for body donation in Scotland?

The HTA has no role in regulating anatomy teaching in Scotland. If you live in Scotland and wish to donate your body, you will find contact details on the left side of this page.

What options exist if a witness did not sign the consent form?

If someone wants to donate their body for medical research but at the time of death it is discovered that a witness has not signed their consent form, the only option is donating their brain to a bank, however the brain bank would probably have to receive it within 48 hours. Brain banks usually accept consent from a next of kin but they have the right to decline.

Are there any limitations or conditions to body donation?

All medical schools welcome the offer of a donation. However, certain medical conditions may lead to the offer being declined. Medical schools can give you more information about these conditions and any other reasons why a body donation may be declined.

Post-mortem examination (sometimes referred to as an 'autopsy') is an important reason why a medical school might decline the offer of a body donation. We recommend that potential donors and their families are prepared to consider alternative arrangements in these circumstances, which can arise unexpectedly. Depending on the circumstances of a person's death, a Coroner might require, by law, that a post-mortem examination takes place.

It is important to note that medical schools might not be able to accept donated bodies during holiday periods, such as Christmas.

Can I consent on behalf of someone to donate their body to a Medical School for anatomical examination, if I have been granted 'power of attorney'?

No. The Human Tissue Act requires a positive decision to be made by the person, themselves, before their death.

Donating your brain

Diseases of the brain are increasingly common in the UK due to an ageing population suffering from conditions such as Parkinson's and Alzheimer's disease. There are no known cures for many of these diseases, so high priority is given to research seeking to understand them better – potentially leading to new treatments.

Scientists study human tissue to improve their understanding of how diseases start and progress, and what keeps us healthy. Research such as this often leads to different ways of diagnosing disease and can help develop new treatments.

To ensure research is thorough, it is also extremely important to have access to brain tissue from deceased people who did not have the diseases. This is known as control tissue and it is crucial that scientists have access to this so that they can compare it directly with tissue from a person with a disease. These valuable donations are essential for developing new and better treatments for people with diseases and in the search for a cure.

Brain donation has helped with the discovery and treatment of diseases such as schizophrenia, Alzheimer's disease, Parkinson's disease and variant Creutzfeldt-Jakob Disease.

The role of the HTA in brain donation

The HTA licenses organisations that store human tissue, including brains, for research. We believe that good regulation supports good science, which in turn improves healthcare. The HTA ensures that tissue is removed and stored in an appropriate and well-managed way. Our regulation ensures that the public and researchers can have confidence that the wishes of individual patients and their families are respected. Medical research needs the best quality tissue to work on, and the HTA's regulation helps ensure it is stored to high standards.

Please note that there is not an out-of-hours telephone service for brain donation enquiries. Please leave a message on our answer machine.

How to donate your brain for research

The following human tissue banks accept brain and spinal tissue for research. As well as needing particular types of tissue from people with the conditions named below, they also accept donations of brain and spinal tissue from people without these conditions as controls to the research.
